Cable Lockout

This device is not intended to be used as a safety lanyard or a suspension device.

Application Procedure

1. Extend and pass cable through or around all components intended to be locked out.
2. Insert and feed cable through the hole on the lockout device.

Note: To ensure proper installation, follow the directional arrow displayed on the front of the lockout device when feeding the cable through the hole.

3. Pull cable system tight securing all components intended to be locked out.
4. Squeeze the trigger handle to lock the cable in place.
5. Hold the trigger and insert a padlock through the lockout device (See **Figure 1**).
